Date:

Event Management System

CONTEXT

1.Objectives

2.Input and Output

3.Details of Modules

4.Usecase Diagrams

5.Tools/Platforms/Languages

6.Coding(PHP and My Sql)

7.Database Tables

8.Output Screens

9.Test Cases

10.Limitations of the Project

11.Scope of Future Reference

Bibilography

1.OBJECTIVES

Event management system is a web application, used for all event organizers. Now a days all event managers doing their business through online. Autherization and authentication of user is done through online. Customers can search for various events and their prices through online.

In our project customer can book for event.

2.INPUT AND OUTPUT

Input Forms in our project:

1) Event booking form

Output Pages in our project:

1) Display All events Page
2) About us page
3) Contact us page

3.DETAILS OF MODULES

Our Project having Three Modules:

1) Admin Module
2) Users Module
3) Events module

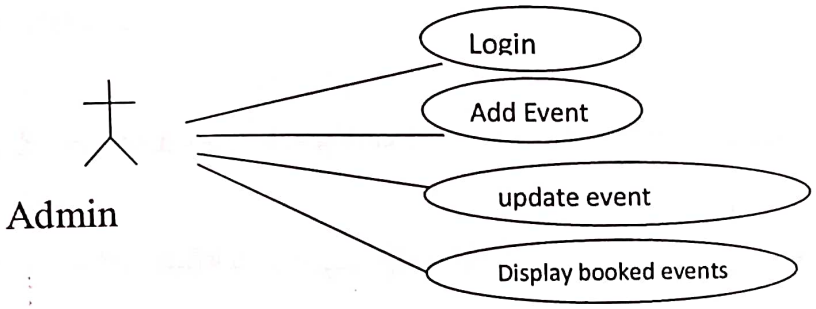
In Admin Module, admin login form having admin username and password. If these values are matched with backend database values, then only admin gets authentication to the server. After authentication, admin control panel will be displayed.

In Users Module, user can register and login to his account. If these values are matched with backend database values, then only admin gets authentication to the server. After authentication, user control panel will be displayed.

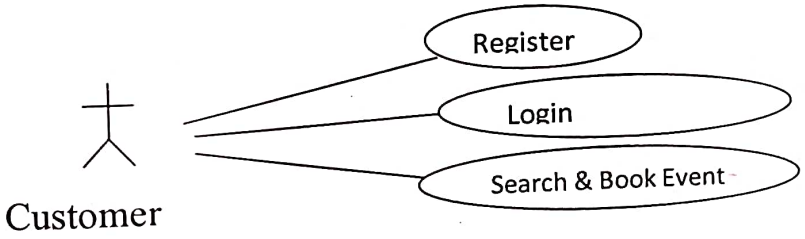
In Events module, user can book a module. Admin can view all booked events.

4.USECASE DIAGRAMS

1) Usecase diagram for Admin:



2) Usecase diagram for User:



5.TOOLS/PLATFORMS, LANGUAGES

Operating System: Windows 7

Server: Apache

Server Side Scripting Languages: PHP Programming Language

Client Side Scripting Languages: HTML, CSS, JAVA SCRIPT

About PHP and MySql

6.CODING

1) Index.php:

```
<html>

9.TEST CASES

1) Test Case 1: Admin Login- check username and password values with the values that are already stored in the server. If these values are matched with the values stored in the server, then only the admin gets authentication.- It is success.

2) Test Case 2: Customer Login: check username and password values with the values that are already stored in the server. If these values are matched with the values stored in the server, then only the customer gets authentication.- It is success.

3) Test Case 3: Book Event: first search for event. After that book event. Check all values are properly storing in booking table. – it is success.

4) Test Case 4: View Bookings: login to admin panel. After that check in view bookings page. Already booked events are

is success.

10.LIMITATIONS OF PROJECT

In this project we developed all the functionalities of event organizations. Here limitations are, this project not contains all the roles of event management employees. Here we used only admin to manage and maintain applications. In real world applications, multiple branches of customers exist. Here in this project we used only one branch customers for event organization.

11.SCOPE OF FUTURE REFERENCE

This project is very much used in future for event management related applications. Here, we developed this application with fully secured server side scripting language PHP. All the functionalities of event management application are included in this project.
